[^0]:    1 E.coli is a bacterial indicator of faecal contamination and is found in the gut of humans and animals.
    2 Turbidity is a measure of the clarity of the water. It is affected by the presence of suspended material in the water. *Rolling 12 month $95 \%$ UCL of mean.
    3 Trihalomethanes are disinfection by products formed when chlorine reacts with naturally occurring organic matter in the water.
